Abstract

Most of the bone metastasis origination from Follicular Thyroid Carcinoma (FTC) will present as non-solitary and non-isolated. We present an extremely unique case of an isolated and solitary lesion in an unusual site, scapula, originated from FTC presenting incredibly about ten years after the initial successful treatment.

Title:

Delayed solitary metastasis from primary follicular thyroid carcinoma to the scapular bone, a case report, and review of the literature

Authors' name and their affiliation:

1. Ramesh Omranipour, Professor of the Oncological Surgery, Department of General Surgery, Tehran University of Medical Sciences, Cancer Institute, Tehran, Iran. Breast Disease Research Center, Tehran University of Medical Sciences, Tehran, Iran.
 2. Athena Farahzadi, Fellow of Oncological Surgery, Tehran University of Medical Sciences, Cancer Institute, Tehran, Iran.
 3. Maryam Hassanesfahani (Corresponding Author) Fellow of Oncological Surgery, Tehran University of Medical Sciences, Tehran, Iran. E-mail: maryam.h.esfahani82@gmail.com
- Authors' contribution:**All authors were involved in data collection, interpretation, drafting the article, revision of the manuscript, and the final approval of the version to be published.**Ethics statement:**An informed written consent was obtained from the patient and the proposal of project was approved by the Ethic Committee of Research in Breast Research Center in Tehran University of Medical Sciences
