

**Table 1:** Population-level summary statistics for the 16 localities in the CFM population dataset. Lower diagonal indicates pairwise population  $F_{ST}$  values.  $F_{ST}$  calculations with p-values  $< 0.05$  after Benjamini-Hochberg correction are bolded.  $N$  = sample size;  $H_o$  = observed heterozygosity;  $H_e$  = expected heterozygosity. Locality abbreviations follow Fig. 1.
