

Ultrasound and Doppler in the UA

We don't have prescription for the planned Cesarean section

Doppler indexes in the CMA

$PI > 0,835$

We don't have any complication and can choose vaginal delivery

$PI \leq 0,835$

Count amniotic volume

$AI > 85$

$AI \leq 85$

If delivery didn't start in 48 ours

Ultrasound and Doppler daily, CTG 2 times a day

Planned delivery in near 48 ours.

Repeat examination

Vaginal observaton

If contraction start

Mature cervix

Immature cervix

Prolong CTG while labor

Amniotomia

Cesarean Section

CTG is normal

CTG is ubnormal

Clear amniotic fluid

Meconium amniotic fluid

Continue vaginal labor

Figure 6. Algorithm of examination and rout of labor in uncomplicated pregnancy in 40 weeks and more.
