

Table 1: Model calibration efficiency criteria \overline{NSE} [%] using a split sample test.

| \overline{NSE} efficiency criteria | complete time series | first half of data set | second half of data set |
|---|-------------------------|---------------------------|----------------------------|
| calibration on total time series | 89,59 | 90,58 | 87,12 |
| calibration on first half of data set | 88,80 | 91,53 | 83,43 |
| calibration on second half of data set | 87,76 | 86,59 | 88,65 |
