

**TABLE 3 Proportion of patients achieving efficacy endpoints**

Vomiting	Fosaprepitant (n =55 ), n (%)	Aprepitant (n =53 ), n (%)	P-value
Acute			
Nil (CR)	52 ( 95 )	42 ( 79 )	P=0.01*
Mild	2 ( 4 )	6 ( 11 )	
Moderate	1 ( 2 )	2 ( 4 )	
Severe	0 ( 0 )	3 ( 6 )	
Delayed			
Nil (CR)	39 ( 71 )	35 ( 66 )	P=0.89
Mild	5 ( 9 )	7 ( 13 )	
Moderate	5 ( 9 )	4 ( 8 )	
Severe	6 ( 11 )	6 ( 11 )	
Overall			
Nil (CR)	38 ( 69 )	30 ( 57 )	P=0.18
Mild	6 ( 11 )	10 ( 19 )	
Moderate	4 ( 7 )	5 ( 9 )	
Severe	7 ( 13 )	8 ( 15 )	

Grade of vomiting was defined as follows: Grade 0 (nil)-no vomiting (complete response); Grade 1 (mild)-1-2 episodes in 24 h; Grade 2 (moderate)-3-5 episodes in 24 h; Grade 3 (severe)-≥6 episodes in 24 h, tube feeding, total parenteral nutrition, or hospitalization. Grade 4 vomiting (life-threatening consequences; urgent intervention indicated) or Grade 5 vomiting (death) .n, number of patients.
