

**A. Different *Anopheles* transmit different *Plasmodium* species**

Different species of Malaria vectors

**B. Malaria vectors should be identified and characterized:**

- Control strategies differ depending on the type of species Present

**Molecular identification should be practiced more often than morphological identification.**

**C. Accurate Identification of malaria vectors**

**D. Development of effective control strategies - Species specific control strategies.**

**E. Elimination of malaria vectors**

**F. Eradication of malaria**

0% Malaria cases  
0% malaria related death
